EXAMINER'S PROPOSED AMENDMENT

Claims

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-13. (Canceled)

14. (Currently Amended) A method for generating an output document in a user preferred style using a style capture tool, comprising the steps of:

- reading an example declaration file representing said user preferred style into an input buffer;
- searching said input buffer for a pattern that matches that of an expected section;
- if said pattern is found,
 - from the position of said pattern, defining a first bound by searching backwards in said buffer until a previous expected search pattern is found;
 - from the position of said pattern, defining a second bound by searching forwards in said buffer until a next expected search pattern is found;
 - copying a string of characters contained within said input buffer between said first bound and said second bound to a template buffer;
 - parsing said template buffer to isolate expected keywords, and names and subsections;

if said expected section is a section that is repeated in a document, saving in said template buffer the line offsets of keywords, names and other elements;
replacing content-specific subsections with macro names; and
if said pattern is not found,
creating a default template buffer for said expected section.

15. (Currently Amended) The method of claim 14, comprising the further step of:
getting a said template buffer for each section to be generated in said output document;
getting user content for all sections of said output document;
creating an output buffer for storing said output document;
for each section of said output document,
putting a corresponding template buffer into a temporary output buffer;
replacing macro names in said temporary output buffer with user content information;
if this section is ~~expected to be repeated and the user desires alignment~~, using corresponding template offsets to modify said temporary output buffer for aligning keywords, names, and other sub-sections;
inserting the content of said temporary output buffer into said output buffer; and
writing said output buffer to a file.

16-44. (Cancelled)

REASONS FOR ALLOWANCE

2. Claims 14 and 15 are allowed.
3. The prior art of record fails to disclose or suggest features in the Proposed Amendment.
4. The following is an examiner's statement of reasons for allowance: The Cited references of Lie (Cascading Style Sheets, Level 1, W3C) fails to teach the amended Independent claim 14. The claim describes the use of a style capture tool. As described in the specification on page 11, paragraph 1, the style capture tool uses syntax rules to determine how to capture the style templates from the example declaration file. The style capture tool determines sub-templates by dividing up the example file based on syntax patterns provided by rules. A CSS is used to apply styles to a web page not to capture styles based on rules. Furthermore Cascading Style sheets fail to search

Art Unit: 2178

backwards/forwards for a search pattern defined by bounds. Instead a CSS is referenced in an HTML document and then parsed to apply the layout or style information to the HTML content. Also the invention stores the offset of keywords, names and other elements in a template buffer, thereby eliminating redundant processing for repeating sections.

5. Independent claim 14 uses several IF statements, thus the first IF statement describes that if the pattern is found then search forwards and backwards based on the defined first and second bound, including copying of the characters, parsing of the template, saving offset information for repeating sections and replacing content with macro names. IF no pattern is found then a default template buffer is created for an expected section. Despite the conditional statements, even if the pattern is not found in a particular scenario the invention itself must still include the capability to perform the steps (searching, copying, parsing, saving and replacing).

6. Furthermore, the claimed feature would not have been obvious to a person of ordinary skill in the art at the time of the invention in view of the prior art of record. Because Lie (Cascading Style Sheets, Level 1, W3C) fails to teach the features recited in the independent claims has described above. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled Comments on "Statements of Reasons for Allowance".
